

CLAIMS

1. An electrophoresis method characterized by subjecting a protein to electrophoresis for size separation without a heat-denaturing treatment.

5

2. The electrophoresis method according to claim 1, characterized in that a protein dissolved in water is subjected to electrophoresis.

10

3. The electrophoresis method according to claim 1 or 2, characterized in that two or more molecular weight markers are subjected to electrophoresis together with a protein, wherein at least one of the markers is adjusted to a lower concentration as compared to a standard concentration.

15

4. The electrophoresis method according to any one of claims 1 to 3, characterized in that two or more molecular weight markers are subjected to electrophoresis together with a protein, wherein one of the markers is adjusted to a concentration of 1/10 to 10 times the concentration of a protein to be tested.

20

5. The electrophoresis method according to any one of claims 1 to 4, wherein a type of electrophoresis is selected from the group consisting of capillary electrophoresis method, microchip electrophoresis method and nano-channel electrophoresis method.
